Report Overview

Even a cursory look at the number of children in “substantiated” cases of child maltreatment versus the number of children in the general population reveals a startling and concerning level of disproportionality based on race or ethnicity. (“Substantiated” is not the same as a finding of guilt in a criminal court. It means only that the agency believes abuse or neglect occurred. In most states, the investigator need only believe there is slightly more evidence of maltreatment than not to reach this conclusion. For this reason “substantiated” appears in quotes throughout this report.)

There is strong disagreement in the child welfare field over the cause of this disproportionality. Some argue that it means only that, for a variety of reasons, there is more child maltreatment in families of color. Others say disproportionality is largely a function of the same racial bias that permeates the rest of American society. Still others believe there is some truth to both arguments.

We take no position on that dispute in this report, except to note that, to whatever extent bias may be a factor, respecting parental rights can serve as a vital check on such bias.

CHOOSING A METRIC

Several metrics have emerged in recent years to facilitate the study of race representation in child protection contacts. We have chosen to apply the United States Government Accountability Office’s disproportionality index, using the number of “substantiated” reports because those data are easier to come by from a reliable source.

Racial disproportionality “refers to the extent that children of a certain race or ethnic group are over- or underrepresented ... relative to their proportion in the population,” according to Rep. Charles Rangel’s (D-NY) letter introducing the GAO report in 2007. For instance, if Native American children make up 10% of the general child population in a given region, but comprise 18% of the “substantiated” cases, there exists a disproportionality of 80%. This means Native American children are “substantiated for maltreatment” at rates 80% higher than their proportion of the general population would lead us to expect. This is noted as a disproportionality index of 1.80, or 0.80 (80%) above 1.00.

WHAT WE DID

This report is comprised of one-page summaries for each state and the District of Columbia (D.C.). Each summary includes a chart of the data we gathered—percentage of total child population by race/ethnicity, and number and percentage of “substantiated” maltreatment population by race/ethnicity—and a corresponding graph. We took the data from the Child Maltreatment 2016 report prepared by the Children’s Bureau (Administration on Children, Youth and Families, Administration for Children and Families) of the U.S. Department of Health and Human Services.

One challenge we found in creating our graphs, however, is that not all disparity is equal. A state “substantiating” for 10 children rather than 8 yields a grossly inflated index versus “substantiating” allegations concerning 90 children rather than 88; each is “disproportionate” by only two children, but the size of the overall population matters.

To allow for this, we have used lighter shading where disproportionate numbers occur in much

smaller populations. Specifically, if the number of children “substantiated” for maltreatment is lower than 10, we did not shade that index at all. If the population was between 10–30, we used the lighter shading as a warning that distortion of the data may exist. We shaded the rows of the data charts in a similar fashion; where shading was not used (i.e., on Table 1), we used italics for indices where the number of children “substantiated” for maltreatment is between 10–30. For the same reason, we also did not point out disproportionality indices for any group whose general child population represented < 1% of the population, unless it had more than 10 in the alleged maltreatment population.

All of the numbers, including those of small child populations and maltreatment populations, are included in the tables for reference.

WHAT WE FOUND

Forty-seven states and D.C. show a clear pattern of disproportionality in at least one race/ethnic group, whether it involves primarily African-Americans (Arizona, Illinois, Nevada, New Jersey, and eight other states); Native American people groups (Alaska, Idaho, etc.); Hispanics (Maine, Massachusetts); those of mixed race (Arkansas, West Virginia); or even Whites (Mississippi). Ten states showed disproportionality in the number of African-Americans and those of Multiple Races, which may be closely related, including Florida, Michigan, Pennsylvania, and Texas. And more than twenty states showed significant disproportionality against several minority groups across the board (including California, Colorado, Minnesota, Montana, New York, and eighteen other states). Georgia, which shows low-level disproportionality among the African-American, Multiple Race, and White categories, does not fit neatly into any of these groupings; disproportionality exists, yet seems “equally distributed” among these largest sections of the population. See Table 1 and the following individual state overviews for details. Note that Table 1 shows all the qualifying disproportionality indices for the state, while the summaries above seek to summarize where the main issues are in that particular state.

PROTECTING PARENTAL RIGHTS ADDRESSES DISPROPORTIONALITY

As noted above, the reasons for disproportionality are a matter of dispute. But to whatever extent bias may affect the system, it can be at least partially addressed by a policy to protect fundamental parental rights.

Where parental rights are protected and respected, they serve as a limitation on the otherwise unchecked discretion of investigators, lawyers, and judges. For bias to reign, the biased party must have the latitude to exercise his or her own (biased) judgment. They must have flexibility to treat one person “less equally” than another. When all parents’ rights to direct the upbringing, education, and care of their children are upheld equally, that latitude disappears, or is at least significantly diminished.

Ultimately, we believe the numbers speak for themselves and we hope the attached charts will help to amplify their voice.

Table 1: Disproportionality Indices by State Overview

The table below is based on 2016 data from the Children’s Bureau’s Child Maltreatment 2016 report. An index value over 1.00 indicates an over-representation of that ethnicity/race in the “maltreatment” population, with higher values indicating greater disproportionality. Indices > 1.10 with > 30 in the “maltreatment” child population are listed in regular font; italicized font indicates indices > 1.10 with > 10 but < 30 in the “maltreatment” child population.

Total # of States with Disproportionality Index of at Least 1.10 with “Maltreatment” Child Population > 30							
	41	0	3	24	8	17	6

* In Maine, there are 974 incidents (28.3% of the total) where race is unknown, which could radically raise the “maltreatment” child population for any or all of the races/ethnicities listed. However, it is safe to say that Hispanic children at least are more likely to be involved in a “substantiated” child welfare maltreatment investigation, as the Unknown instances could only maintain or increase its “maltreatment” population.

National Disproportionality

Disproportionality of Minority Children in Child Welfare Investigations Nationwide

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

- 1.51** In 2016, **African American children** were “substantiated for maltreatment” at a rate 1.51 times more than their proportions in the U.S. child population.
- 1.23** In 2016, **Multiple Race children** were “substantiated for maltreatment” at a rate 1.23 times more than their proportions in the U.S. child population.
- 1.59** In 2016, **Native American children** were “substantiated for maltreatment” at a rate 1.59 times more than their proportions in the U.S. child population.

Highlighted row shows disproportionality indices of at least 1.10. (Note: If the “maltreatment” child population is between 10-30, the row is highlighted in lighter gray because even slight variation at such low numbers can easily affect the index; rows with “maltreatment” child population < 10 are not highlighted.) An index number below 1.00 indicates an under-representation of that ethnicity/race in the “maltreatment” child population, while a number above 1.00 indicates an over-representation. Native American includes Alaska Native/Native American/American Indian.

“Maltreatment” child population refers to the population of children that a child welfare agency believes have been maltreated. *Substantiated* means only that a child welfare agency believes maltreatment occurred. *Maltreatment* refers to abuse or neglect. They are in quotations since the federal government has acknowledged that racial bias often plays a part in these determinations.*

The term *disproportionality index* and its explanations were adapted from Appendix II of the GAO report.* See “Choosing a Metric” on page 7 for details.

Disproportionality of Minority Children in California Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

2.60 In 2016, **African American children** in California were “substantiated for maltreatment” at a rate 2.60 times more than their proportions in California’s child population.

2.54 In 2016, **Native American children** in California were “substantiated for maltreatment” at a rate 2.54 times more than their proportions in California’s child population.

Highlighted rows show disproportionality indices of at least 1.10. (Note: If the “maltreatment” child population is between 10-30, the row is highlighted in lighter gray because even slight variation at such low numbers can easily affect the index; rows with “maltreatment” child population < 10 are not highlighted.) An index number below 1.00 indicates an under-representation of that ethnicity/race in the “maltreatment” child population, while a number above 1.00 indicates an over-representation. Native American includes Alaska Native/Native American/American Indian.

“Maltreatment” child population refers to the population of children that a child welfare agency believes have been maltreated. *Substantiated* means only that a child welfare agency believes maltreatment occurred. *Maltreatment* refers to abuse or neglect. They are in quotations since the federal government has acknowledged that racial bias often plays a part in these determinations.*

The term *disproportionality index* and its explanations were adapted from Appendix II of the GAO report.* See “Choosing a Metric” on page 7 for details.

Disproportionality of Minority Children in Idaho Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

1.76

In 2016, **Native American children** in Idaho were “substantiated for maltreatment” at a rate 1.76 times more than their proportions in Idaho’s child population.

Disproportionality of Minority Children in Maine Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

2.05 In 2016, **Hispanic children** in Maine were “substantiated for maltreatment” at a rate at least 2.05 times more than their proportions in Maine’s child population.

Important Note: Maine’s data is incomplete.

There are 974 incidents (28.3% of the total) where race is unknown, which could radically raise the “maltreatment” child population for any or all of the races/ethnicities listed. However, it is safe to say that Hispanic children at least are more likely to be involved in a “substantiated” child welfare maltreatment investigation, as the Unknown instances could only maintain or increase its “maltreatment” population.

ParentalRightsFoundation.org

Data & Notes

	A. Total Child Population %	B. “Maltreatment” Child Population	C. “Maltreatment” Child Population %	D. Disproportionality Index
African American	2.7	52	1.5	0.56
Asian	1.5	11	0.3	0.21
White	88.6	2,095	60.8	0.69
Multiple Race	3.7	107	3.1	0.85
Hispanic	2.7	188	5.5	2.05
Native American	0.8	18	0.5	0.66
Native Hawaiian/ Pacific Islander	0.0	1	0.0	0.64
Unknown	N/A	974	28.3	
<i>TOTAL</i>		3,446		

Important Note: Maine’s data is incomplete. The 974 incidents where race is unknown could radically raise the disproportionality index for any or all of the divisions listed above. However, since it could only raise, and not lower, the disproportionality index, it is safe to say there is at least a 2.05 disproportionality index for Hispanics.

Gray highlighted rows show disproportionality indices of at least 1.10. (Note: If the “maltreatment” child population is between 10-30, the row is highlighted in lighter gray because even slight variation at such low numbers can easily affect the index; rows with “maltreatment” child population < 10 are not highlighted.) An index number below 1.00 indicates an under-representation of that ethnicity/race in the “maltreatment” child population, while a number above 1.00 indicates an over-representation. Native American includes Alaska Native/Native American/American Indian.

“Maltreatment” child population refers to the population of children that a child welfare agency believes have been maltreated. *Substantiated* means only that a child welfare agency believes maltreatment occurred. *Maltreatment* refers to abuse or neglect. They are in quotations since the federal government has acknowledged that racial bias often plays a part in these determinations.*

The term *disproportionality index* and its explanations were adapted from Appendix II of the GAO report.* See “Choosing a Metric” on page 7 for details.

Disproportionality of Minority Children in Maryland Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

1.38

In 2015, **African American** children in Maryland were “substantiated for maltreatment” at a rate 1.38 times more than their proportions in Maryland’s child population.

Column D: Portion of state “maltreatment” population (C) divided by portion of total state child population (A).

* U.S. Government Accountability Office, *Report to the Chairman, Committee on Ways and Means, House of Representatives: African American Children in Foster Care* (Washington, DC: 2007), 4, 73–76, <https://www.gao.gov/new.items/do7816.pdf>.

Disproportionality of Minority Children in Nevada Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

2.33

In 2016, **African American children** in Nevada were “substantiated for maltreatment” at a rate 2.33 times more than their proportions in Nevada’s child population.

1.11

In 2016, **Native Hawaiian/Pacific Islander children** in Nevada were “substantiated for maltreatment” at a rate 1.11 times more than their proportions in Nevada’s child population.

Data & Notes

	A. Total Child Population %	B. “Maltreatment” Child Population	C. “Maltreatment” Child Population %	D. Disproportionality Index
African American	9.6	1,090	22.3	2.33
Asian	5.9	39	0.8	0.14
White	35.9	1,758	35.9	1.00
Multiple Race	6.3	317	6.5	1.02
Hispanic	40.9	1,248	25.5	0.62
Native American	0.8	30	0.6	0.76
Native Hawaiian/ Pacific Islander	0.7	36	0.7	1.11
Unknown	N/A	373	7.6	
<i>TOTAL</i>		4,891		

Highlighted rows show disproportionality indices of at least 1.10. (Note: If the “maltreatment” child population is between 10-30, the row is highlighted in lighter gray because even slight variation at such low numbers can easily affect the index; rows with “maltreatment” child population < 10 are not highlighted.) An index number below 1.00 indicates an under-representation of that ethnicity/race in the “maltreatment” child population, while a number above 1.00 indicates an over-representation. Native American includes Alaska Native/Native American/American Indian.

“Maltreatment” child population refers to the population of children that a child welfare agency believes have been maltreated. *Substantiated* means only that a child welfare agency believes maltreatment occurred. *Maltreatment* refers to abuse or neglect. They are in quotations since the federal government has acknowledged that racial bias often plays a part in these determinations.*

The term *disproportionality index* and its explanations were adapted from Appendix II of the GAO report.* See “Choosing a Metric” on page 7 for details.

Disproportionality of Minority Children in Oklahoma Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

1.10 In 2016, **African American children** in Oklahoma were “substantiated for maltreatment” at a rate 1.10 times more than their proportions in Oklahoma’s child population.

3.01 In 2016, **Multiple Race children** in Oklahoma were “substantiated for maltreatment” at a rate 3.01 times more than their proportions in Oklahoma’s child population.

Native Hawaiian/ Pacific Islander	0.2	6	0.0	0.20
Unknown	N/A	5	0.0	
<i>TOTAL</i>		<i>14,308</i>		

Highlighted rows show disproportionality indices of at least 1.10. (Note: If the “maltreatment” child population is between 10-30, the row is highlighted in lighter gray because even slight variation at such low numbers can easily affect the index; rows with “maltreatment” child population < 10 are not highlighted.) An index number below 1.00 indicates an under-representation of that ethnicity/race in the “maltreatment” child population, while a number above 1.00 indicates an over-representation. Native American includes Alaska Native/Native American/American Indian.

“Maltreatment” child population refers to the population of children that a child welfare agency believes have been maltreated. *Substantiated* means only that a child welfare agency believes maltreatment occurred. *Maltreatment* refers to abuse or neglect. They are in quotations since the federal government has acknowledged that racial bias often plays a part in these determinations.*

The term *disproportionality index* and its explanations were adapted from Appendix II of the GAO report.* See “Choosing a Metric” on page 7 for details.

* U.S. Government Accountability Office, *Report to the Chairman, Committee on Ways and Means, House of Representatives: African American Children in Foster Care* (Washington, DC: 2007), 4, 73–76, <https://www.gao.gov/new.items/do7816.pdf>.

Disproportionality of Minority Children in Utah Child Welfare Investigations

The following graph is based on 2016 data from the Children's Bureau's Child Maltreatment 2016 report. An index number below 1.00 indicates an under-representation of that ethnicity/race in the "maltreatment" child population, while a number above 1.00 indicates an over-representation. Indices > 1.10 with > 30 in the "maltreatment" child population are shaded dark red; lighter red indicates indices > 1.10 with > 10 but < 30 in the "maltreatment" child population.

2.69 In 2016, **African American children** in Utah were “substantiated for maltreatment” at a rate 2.69 times more than their proportions in Utah’s child population.

2.08 In 2016, **Native American children** in Utah were “substantiated for maltreatment” at a rate 2.08 times more than their proportions in Utah’s child population.

1.17 In 2016, **Native Hawaiian/Pacific Islander children** in Utah were “substantiated for maltreatment” at a rate 1.59 times more than their proportions in Utah’s child population.

Data & Notes

	A. Total Child Population %	B. “Maltreatment” Child Population	C. “Maltreatment” Child Population %	D. Disproportionality Index
African American	1.2	303	3.2	2.69
Asian	1.7	64	0.7	0.38
White	74.2	6,864	71.4	0.96
Multiple Race	3.5	174	1.8	0.52
Hispanic	17.4	1,817	18.9	1.09
Native American	1.0	192	2.0	2.08
Native Hawaiian/ Pacific Islander	1.0	117	1.2	1.17
Unknown	N/A	83	0.9	
<i>TOTAL</i>		9,614		

Highlighted rows show disproportionality indices of at least 1.10. (Note: If the “maltreatment” child population is between 10-30, the row is highlighted in lighter gray because even slight variation at such low numbers can easily affect the index; rows with “maltreatment” child population < 10 are not highlighted.) An index number below 1.00 indicates an under-representation of that ethnicity/race in the “maltreatment” child population, while a number above 1.00 indicates an over-representation. Native American includes Alaska Native/Native American/American Indian.

“Maltreatment” child population refers to the population of children that a child welfare agency believes have been maltreated. *Substantiated* means only that a child welfare agency believes maltreatment occurred. *Maltreatment* refers to abuse or neglect. They are in quotations since the federal government has acknowledged that racial bias often plays a part in these determinations.*

The term *disproportionality index* and its explanations were adapted from Appendix II of the GAO report.* See “Choosing a Metric” on page 7 for details.
